How to read this report

Each series uses the latest database observation at or before the PPI reference month. Page 2 shows the observation month explicitly; older observations are marked *. Changes use exact prior-month and prior-year observations. -- means unavailable. PPI data are subject to revision.

Source: U.S. Bureau of Labor Statistics Public Data API (api.bls.gov). Final demand PPI: WPSFD4, seasonally adjusted. Retail prices: national averages, not seasonally adjusted. CPI all items and food at home are seasonally adjusted. Unemployment is seasonally adjusted. Changes are calculated from stored database values.

* Older observation; no current-month value is shown. Historical values may refer to discontinued series. T-bone is excluded because its BLS series returns no current observations and the former script targeted the sirloin table. The all-uncooked-beef-steaks mapping is corrected to APU0000FC3101.

Unemployment changes above are relative percent changes in the rate, not percentage-point changes. Database column precision can round BLS values. Series IDs, all stored observations and API availability are retained in the JSON file alongside this PDF.

Protein MoM detail

2026-08 to 2026-09 | Retail prices in USD per pound

Combined price is an equal-weight average of the listed series with observations in both months. The dollar difference is current minus prior average; MoM is that difference divided by the prior average. These are descriptive averages, not sales-weighted BLS indexes. Broad categories and individual cuts can overlap.
